DECRACLOUD DATA SHEET

Product Description:

DECRACLOUD is a suspended acoustic ceiling system designed to improve sound absorption while creating a visually light and modern ceiling appearance. The system consists of PET acoustic panels installed as floating "clouds" below the structural ceiling using cables or suspension hardware.

By leaving open space around the panels, DECRACLOUD allows sound to be absorbed from both sides of the panel, increasing acoustic efficiency compared to traditional ceiling systems. It is ideal for offices, meeting rooms, educational spaces, hospitality areas, and open work environments where both acoustic comfort and architectural design are important.

Types of DECRACLOUD:

1. Flat Clouds: Round, square, rectangular, hexagon, etc. acoustic panels suspended horizontally from the ceiling.

2- 3D DECRASTAR: Three-dimensional suspended acoustic feature made from PET panels arranged in a star-shaped geometric form.

3- SONOWAFFLE: Grid-style acoustic ceiling system made from interlocking PET panels forming a waffle structure**.**

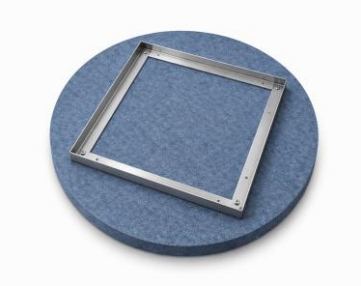

Technical Specifications

Composition	100% PET (>75% recycled content)
Panel Construction	9, 12 or 24 mm
Density	1900, 2400, 3500 g/m² respectively
Panel Size	Customized.
Design	Flat, 3D and mold
Fire Rating	ASTM E84 – Class A
Installation	L keels/Cables
Colors	96 standard DECRASOUND colors

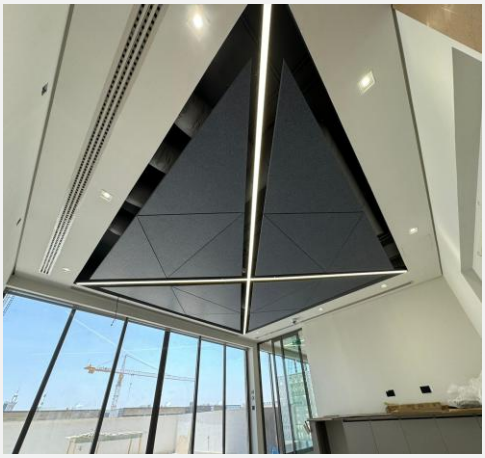

Flat Clouds: Round, square, rectangular, hexagon, etc. acoustic panels suspended horizontally from the ceiling.

Installation: Flat DECRACLOUD panels are suspended horizontally below the ceiling using **L-keels connected with stainless steel cables or just Cable gripper kit.**

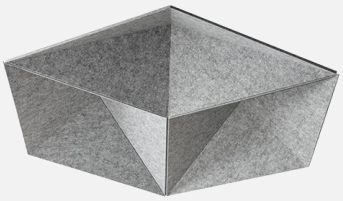

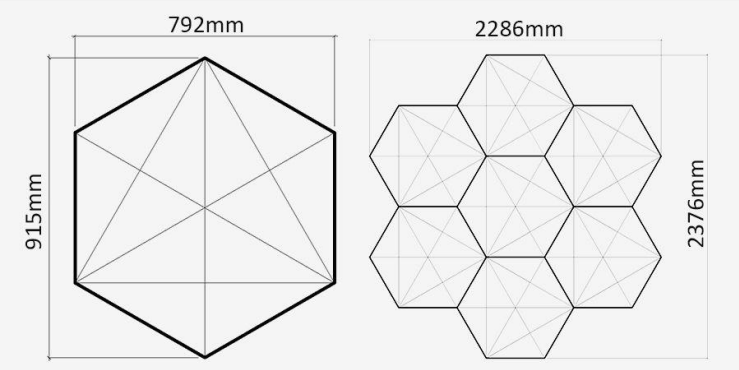

<u>2- 3D DECRASTAR:</u> Three-dimensional suspended acoustic feature made from PET panels arranged in a star-shaped geometric form.

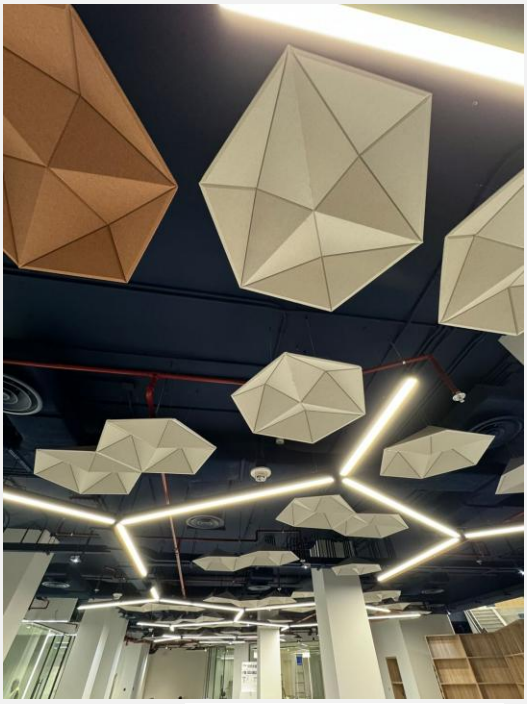

Installation: Flat DECRACLOUD panels are suspended horizontally below the ceiling using **hook cables.**

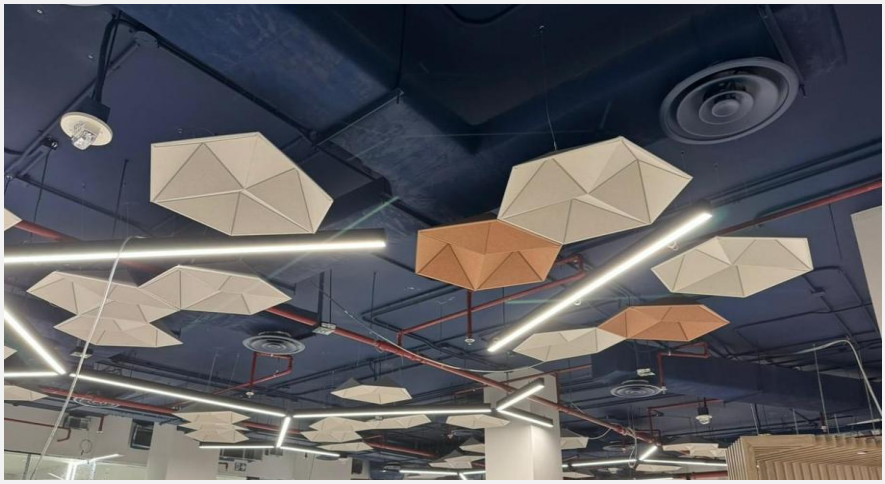

HEXASTAR: Standard size 792x915 mm

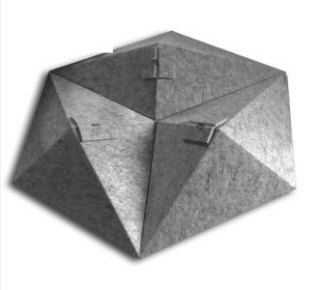

Customized sizes available upon request.
